

# Workshop: Methods in Pharmacoepidemiology Drug Utilization Studies

*Organized by The Doctoral Programme in Epidemiology at KI*

**Description:** This workshop will provide insight into drug utilization measures (incidence, prevalence, adherence/persistence) for individual-level drug dispensing data, and will be an interactive mix of theory and hands-on analysis, interpretation, and visualization. We will provide real-world examples of why first investigating the patterns of use of your drug/drug class of interest in the study population is important for informing your pharmacoepidemiology research questions and study designs.

**Who is this workshop for?** This workshop is aimed primarily for doctoral students at KI in pharmacoepidemiology, epidemiology, biostatistics, public health and other health-related fields, but postdocs and other researchers at KI are also welcome. Participants should have prior knowledge of introductory-level epidemiology and biostatistics, and are required to bring a computer with R, Stata, or SAS installed.

**Monday May 20<sup>th</sup> 13.00–16.00**

**Location: Ragnar Granit, Biomedicum**

***In-person participation only***

**Register by May 17th at this [link](#)**

Questions? *Contact Carolyn Cesta (carolyn.cesta@ki.se) at the Centre for Pharmacoepidemiology, KI*
